

Backhoe Auxiliary Hydraulic Kits for New Holland

Coneqtec introduces their new auxiliary hydraulic kits for the New Holland B95C

TLBs without existing auxiliary hydraulics

Single Direction Kit

to run a hammer or compaction plate.

Dual/Single Direction Combination Kit

capable of running a thumb or auger, as well as your single direction attachments.

These kits contain everything you need to add the auxiliary hydraulics – valve, hoses, boom tubes, and electrical. The valve will include a 6-position flow selector (installed next to the left hand door) that will allow you to easily choose from 6 preset flow settings (8, 13, 18, 22, 26, 30 GPM) to adjust the flow provided to attachments without the need for tools.

Stabilizer Guards

Our stabilizer guards should be added to any rental, municipal, or field units that are involved in demolition, loading rock or concrete, or moving heavy objects that could cause damage to the stabilizer cylinder rods if accidentally dropped. Guards are easily installed, and compatible with all factory stabilizer pads.

TLBs with factory single direction auxiliary hydraulics

Conversion Single to Dual/Single Direction Kit

for those that need the ability to run dual direction attachments as well. This kit will use the existing factory single direction valve, boom tubes and swing tower hoses. The conversion kit includes a dual direction valve add-on, hoses that run underneath the machine, and all necessary electrical components to complete the kit.

Four Corner Strobe Light Kit

The four corner strobe light kit is an excellent safety addition. This strobe kit gives improved visibility in high traffic situations. The lights mount just above the existing turn signals, but still below the top of the cab. We stock many different strobes, beacons, work lights and guards.

Front Fenders

Add front fenders to your backhoe to minimize damage to windshields, machines, machine operators and oncoming traffic, due to flying mud and debris. The rugged, easy to install design makes these fenders a must have on municipal, rental, and owner-operated tractors where frequent 'roading' is performed. Kingpin mounting allows fenders to turn with the wheels.

1000W Block Heater

Our 1000W block heater can be added to the new Tier 4 engines, and has a standard 110V 6' cord.
