

Pin-On Thumb Kits for New Holland

Coneqtec Thumb Kits for New Holland C Series with Extendahoe

Coneqtec thumbs are entirely pin-on and do not require any welds or holes drilled into the dipper stick. This allows users to easily install, remove and transfer the thumbs to other C Series backhoe loaders. The clamps hinge on the bucket pin so they're lined up perfectly with the bucket every time. Clamps can be ordered with smooth edges or with teeth. Hydraulic powered and manual fixed position models are available.

Hydraulic Powered Thumbs

Dual direction (bidirectional) hydraulic kits are required to operate powered thumbs.

Manual Fixed Position Thumbs

There are three working position pinholes and one storage position on the manual fixed position model.

TLBs without existing auxiliary hydraulics

Single Direction Kit

to run a hammer or compaction plate.

Dual/Single Direction Combination Kit

capable of running a thumb or auger, as well as your single direction attachments.

These kits contain everything you need to add the auxiliary hydraulics – valve, hoses, boom tubes, and electrical. The valve will include a 6-position flow selector (installed next to the left hand door) that will allow you to easily choose from 6 preset flow settings (8, 13, 18, 22, 26, 30 GPM) to adjust the flow provided to attachments without the need for tools.

TLBs with factory single direction auxiliary hydraulics

Conversion Single to Dual/Single Direction Kit

for those that need the ability to run dual direction attachments as well. This kit will use the existing factory single direction valve, boom tubes and swing tower hoses. The conversion kit includes a dual direction valve add-on (without 6-position flow selector), hoses that run underneath the machine, and all necessary electrical components to complete the kit.

Other Options: Guards, Lights, Fenders & Heaters
